Selangor, Malaysia

CORE TECH

Languages & Frameworks

Python Django JavaScript
HTML

Databases

MongoDB MySQL InfluxDB
Redis

IoT & Integration

MQTT ChirpStack Node-RED
REST APIs n8n ERP

DevOps & Infra

Docker Linux Traefik Proxmox
Grafana Jira

Visualization

Highcharts amCharts Grafana
Node-RED Dashboards

Ahmad Mustapha Ameen

Software Manager — IoT, Full Stack & System Integration

PROFESSIONAL SUMMARY

Software Manager leading the development, deployment, and integration of IoT-based platforms, smart traffic solutions, and real-time data dashboards. Manages end-to-end delivery — backend systems and APIs, frontend interfaces, workflow automation, and robust service infrastructure — using modern tools and cloud-native practices. Hands-on across the full stack: Python/Django services, time-series data platforms, MQTT-driven device integration, containerised deployment on Linux, and domain routing with Traefik.

CORE RESPONSIBILITIES

Backend & API Development

- Develop scalable REST APIs and backend services using Python (Django).
- Structure and manage time-series and relational data using MongoDB, MySQL, Redis, and InfluxDB.
- Integrate sensor and traffic data via MQTT messaging protocols.

Frontend & Visualization

- Create interactive dashboards and interfaces with HTML, JavaScript, Highcharts, and amCharts.
- Design real-time visual monitoring systems using Grafana and Node-RED.

IoT Device & Platform Integration

- Configure and manage IoT infrastructure using ChirpStack.
- Build and automate microservices for traffic lights, cameras, and sensors using Node-RED and MQTT.
- Utilise n8n for flexible, AI-powered workflow automation.

DevOps & Infrastructure

- Deploy containerised applications with Docker on Linux servers.
- Use Traefik to manage domain routing and reverse proxy setups.
- Set up and maintain virtualised environments via Proxmox for hosting applications.
- Monitor systems and services via Grafana dashboards and alerts.

Project Management & Admin Tools

- Administer and configure Jira to track project progress and team assignments.
- Ensure timely task completion and coordination across engineering teams.

PROJECTS CURRENTLY HANDLING

react.net.my	Traffic Light & IoT Sensor System (Django-based)
mpaj.react.net.my	Smart City Platform for MPAJ municipality
stl.kkr.gov.my	Smart Traffic Light System for KKR Malaysia
Node-RED Microservices	Traffic light control, sensor data, camera systems
ChirpStack	IoT device communication and integration platform
ERP Integration	System-level ERP connections for smart infrastructure
n8n Workflows	AI-enhanced process automation and data pipelines

TECH STACK

Python JavaScript HTML Django Node-RED MongoDB MySQL
InfluxDB Redis MQTT REST APIs ChirpStack Grafana Highcharts
amCharts Docker Traefik Proxmox Jira n8n Linux Servers
